Open Source Contributions

sveltejs/svelte

87k+ stars, core UI framework | [PR #18521](#)

- Resolved a keyed each-block compiler failure by updating the client AST transform so computed destructuring keys bind in scope, preventing undefined-variable crashes at runtime. Landed on main.

prisma/prisma

47k+ stars, core TypeScript ORM | [PR #29701](#)

- Corrected Bytes decoding by allocating independent buffers instead of Node shared-buffer slices, eliminating cross-row data leakage in SQL query results. Accepted upstream.

supabase/supabase-js & supabase/ssr

official Supabase SDK & auth | [PR #2537](#) | [PR #258](#)

- Surfaced typed codes on StorageApiError and restored domain-scoped cookie teardown on sign-out, improving REST API error handling and Next.js authentication reliability (#2537, #258). Upstreamed both.

refined-github

31k+ stars, 100k+ developers | [PR #9777](#)

- Adjusted conventional-commit label coloring with case-insensitive matching for capitalized types (Fix, Feature, Refactor), restoring consistent UI for contributors. Shipped on main.

Sugar Labs / Music Blocks

Google Summer of Code organization | [PR #7727](#) | [PR #7731](#)

- Stabilized legacy Turtle Blocks import and numeric action labels by fixing a project-format mismatch, preventing classroom project load failures. Closed on master.

Projects

Unhold — Bank/UPI Freeze Case Management

[GitHub](#) | [Live](#)

- Architected a full-stack case management system with **Next.js 16**, **TypeScript**, **Supabase**, **Node.js**, and **Express REST APIs**, enabling automated evidence intake and case-state transitions.
- Orchestrated a **4-agent** drafting pipeline on a **deterministic state machine** with LLM classification, cutting manual legal-letter effort while keeping human review gates.
- Secured document handling with multimodal scan checks, **PII redaction**, forgery-risk scoring, and **append-only consent/audit logs** in Postgres before sensitive processing.

Stack: Next.js 16, TypeScript, React, Node.js, Express, Supabase, REST APIs

Tray — Zero-Commission UPI Ordering for Street Stalls and Canteens

[GitHub](#) | [Live](#)

- Delivered **multi-tenant** isolation with **PostgreSQL Row-Level Security** on a single Next.js deployment, preventing cross-tenant data access across stalls and canteens.
- Established dual payment infrastructure by integrating **P2P UPI** (no platform fee) and **HMAC-verified Razorpay** webhooks, resulting in **zero duplicate order settlements**.
- Accelerated order visibility to **under 1 second** across customer, kitchen, and admin clients via **Supabase Realtime**, with **Redis** rate limits and **70+ Vitest** tests.

Stack: Next.js 15, TypeScript, PostgreSQL, Supabase, Razorpay, Redis, Vercel, continuous integration

AquaVision — Underwater Image Enhancement

[GitHub](#) | [Live](#)

- Deployed a **CPU-only** enhancement service with **Flask**, **PyTorch**, and **OpenCV**, processing images in about **0.8 s** without GPU or paid inference cost.
- Improved restoration quality by **+8.2 UCIQE** and **+3.6 dB PSNR** on a 48-image benchmark by routing 9 degradation types through **MobileNetV2**.
- Hardened release quality with a **16-test pytest CI** suite and **Docker** on Hugging Face Spaces, catching 3 defects pre-release via a 17-route smoke harness.

Stack: Python, Flask, PyTorch, OpenCV, Docker, GitHub Actions, SQLite

Skills

Languages: TypeScript, JavaScript, Python, Java, C++, SQL, HTML, CSS

Frameworks: React, Next.js, Node.js, Express, NestJS, Flask, Zustand, Tailwind CSS

Data: PostgreSQL, MongoDB, Redis, Supabase, SQLite, REST APIs

AI/ML: PyTorch, OpenCV, Hugging Face, LangChain, Gemini

DevOps: Docker, Vercel, GitHub Actions, CI/CD, Git, Vitest, Pytest, Sentry

Education

Jawaharlal Nehru Technological University Anantapur (JNTUA)

B.Tech in Computer Science and Engineering

Aug 2022 – 2026

CGPA: 8.0 / 10.0
